Gessé Soares

Software Developer

📍 São Paulo, Brazil

I turn business needs into technology solutions that deliver real value

About Me

Systems Analyst with 8+ years of experience in IT

Systems Analyst with over 8 years of experience in IT, including more than 7 years analyzing, developing and maintaining business-critical systems with **Progress 4GL/OpenEdge**, **PASOE**, **SQL** and many integrations (**TOTVS**, **SOAP/REST**), with a focus on performance and observability.

Experienced with agile methodologies such as **Scrum** and **Kanban**, and proficient with tools like **Azure DevOps** and **ServiceNow**. Strong background in accounting processes and complex projects, always focused on quality and traceability.

I use **AI** tools to support code analysis, troubleshooting, documentation and productivity, always with technical validation.

Technical Skills

Technologies and tools I work with

Development

- Progress 4GL / OpenEdge
- TOTVS Datasul
- Task Manager / RPW (batch)
- PowerShell (pipeline automation)
- PASOE (Progress Application Server)
- SQL / SQL Server
- C# / .NET (Fundamentals)
- Software Integration

Integrations

- APIs SOAP
- APIs REST
- Web Services
- TOTVS Integrations
- Systems Integration

Tools

- Git & GitHub
- Azure DevOps / Azure Pipelines (code review)
- Google Cloud Platform (GCP)
- ServiceNow
- SQL Server Management Studio

Methodologies

- SCRUM
- Kanban
- Agile Development
- Requirements Analysis

Languages

- Portuguese (Native)
- English (Professional)

Competencies

- Systems Analysis
- Accounting Processes
- Systems Maintenance
- Observability and log analysis
- Performance testing
- Problem Solving

Professional Experience

My journey at Air Liquide

Systems Analyst (Mid-level)

Air Liquide

December 2022 – Present

- I develop customizations for the **TOTVS Datasul** ERP in **Progress 4GL/OpenEdge** for finance, purchasing, inventory, tax and corporate operations; in a recent project for a new business unit, I changed 87 source files, all aligned with the development guidelines.
- I take part in refactoring a legacy system whose codebase went from about 5 million to 1 million lines of code, all brought up to the development standard.
- I build and maintain **REST and SOAP** integrations with mobile apps and partner platforms, with robust handling of HTTP responses and errors, logging instead of on-screen errors, and automation services that reduce manual work.
- I diagnosed timeouts caused by record contention (*record locks*) in the integration between a mobile app's orders and shipping in Datasul; by reviewing transaction scope and record release, integration failures dropped significantly.
- I analyze the performance and observability of **TOTVS/PASOE** integrations, correlating service metrics with TOTVS logs to identify call volume, traffic peaks, execution time and pending sessions, pointing out opportunities for batch processing, caching and rate limiting; I ran performance tests on the new **GCP** server after the migration from the previous provider.
- I lead the migration project from classic **RPW** to **Task Manager** (batch processes): mapping, Windows/Linux compatibility testing, upgrade runbook and production validation.
- I built an automated code review pipeline in **Azure DevOps** using **PowerShell** for Progress sources (.p, .w, .i) that checks only the lines changed in the **Git** diff and enforces naming conventions and best practices, running before the staging syntax check; I also act as a code reviewer for the team.
- I work from requirements gathering to troubleshooting in **Scrum** and **Kanban** teams, including Datasul table surveys for business areas and weekly job status reports.

Systems Analyst (Junior)

Air Liquide

May 2019 – December 2022

- Worked as a Systems Analyst and Developer, leading ticket resolution and the improvement of critical processes through **ServiceNow**.
- Fixed bugs, optimized business processes and developed integrations between **TOTVS** and other systems using **Progress OpenEdge**, **SQL** and **SOAP**.
- Responsible for requirements analysis, solution development and quality assurance for business-critical systems.

Technical Support Analyst

Air Liquide

June 2018 – May 2019

- Provided L1 technical support and customer service, focused on fast, high-quality problem resolution.
- Analyzed, opened and followed up on tickets, working directly with the development team to report and prioritize critical incidents.
- Kept clear, proactive communication with internal and external customers and maintained laptops, printers, phones and routers.

Projects

Study projects published on GitHub

FilmesApi

Study API covering the fundamentals of an API: CRUD, DbContext and AutoMapper.

C# · .NET 5 · Entity Framework Core · SQL Server · AutoMapper · Swagger

View on GitHub →

Courses

Additional training

- **C# Fundamentals Track**
- **SQL Server: Introduction to SQL**
- **C# – Understanding Exceptions**

C# – First Steps

Scrum

Education

Education and qualifications

Bachelor’s Degree in Information Systems

UNINOVE

2018 – 2021

Degree in Information Systems, focused on software development, systems analysis, databases and development methodologies.

Let’s Talk

I’m always open to new challenges and opportunities
